Oven Cleanliness.  
An oven that is constantly in use requires to be kept scrupulously clean. It should not only have the shelves scrubbed out with soda occasionally, but in addition the shelves should be painted with quicklime two or three times a year. An oven treated in this way never becomes caked with grease and there is no unpleasant smell when it is being used.

## WHAT LIGHTS THE VOLCANO?

Eruptions May Be Caused by Heating Water in the Hollows of the Earth.

A volcano is a great hollow mountain. It is named for Vulcan, the Roman god who was supposed to deal with fire, because fire comes out of it. A volcano has a hole at the top called the crater, and this hole seems to lead down into the hot interior of the earth. The inside of the earth is always hot, yet volcanoes are by no means always in eruption, as it is called when they throw out fire and ashes. It must be, then, that something happens which sets the volcano in activity. The possible cause may be guessed from the location of the great volcanoes, which, like Vesuvius, Etna and Hecla, are near the sea.

It may be that the volcano communicates with the earth under the sea, and water passes into the hot interior hollow and creates vast quantities of steam or gas. This gas is formed under great pressure. It must get out somewhere and so finds its way to the crater and escapes with terrific force, sometimes carrying huge masses of rock high into the air.

Heine.  
Matthew Arnold's study of Heine has the following passage:

"Heine's intense modernism, his absolute freedom, his utter rejection of stock classicism and stock 'romanticism,' his bringing all things under the point of view of the nineteenth century, were understood and laid to heart by Germany, through virtue of her immense, tolerant intellectualism, much as there was in all Heine said to affront and wound Germany. The wit and ardent modern spirit of France Heine joined to the culture of sentiment, the thought of Germany. This is what makes him so remarkable; his wonderful clearness, lightness, and freedom, united with such power of feeling and width of range."

## Marbles in Fruit Kettle.

I have a neighbor who for some time has used marbles to keep her fruit from burning during the canning season, and she says the plan works admirably, writes a contributor. She washes half a dozen large marbles and drops them into the kettle when the fruit begins to boil. The bubbles, rising at the bottom of the kettle, keep the marbles moving over the surface in such a manner that the fruit does not touch the bottom long enough to be burned.—Mother's Magazine.

## Pressed Chicken.

Cut a small chicken into four parts, boil in as little water as possible without burning, and watch constantly. When done very tender take out the meat, but keep broth boiling. Pick the meat from the bones, chop it, and add butter, pepper and salt. Take all fat of broth, then pour over the chopped chicken. Then press it, put plate on top with something heavy to hold it down. Set on ice and when very cold slice it and you will have a delicious supper or breakfast dish.

## Practical Household Tips.

Cooked Beans.—If a little baking soda is added when cooking navy beans or shelled beans, they need not be soaked over night, and will be soft in about half the usual time.

Easy Cleaner.—Grease spots on wall paper may be removed by rubbing thoroughly with camphorated chalk.

Scorched Cloth.—Bread crumbs not too stale, rubbed over scorched cloth will cause the burn to disappear.—McClure's Magazine.

## Spanish Salad.

Three pounds meat boiled, five ripe tomatoes, four red peppers, one can French peas, one can mushrooms, three large potatoes, one teaspoonful salt, one onion, one quart hot water, boiled rice or mashed potatoes. Will serve from six to eight persons.
